

## **Acrylic**

- Acrylic is the most popular material when creating displays. With over 70 standard colors and thicknesses ranging from .020 to over 2" there is a type ready for your application. Acrylic, also known as Plexiglas, is very easy to machine, bend, print, and assemble and is lighter and stronger than glass. Along with the different standard colors, acrylic is also available in Non-Glare, Mirrored, Frosted, and Edge Glow or Neon. We work with all of the large distributors in the area so most materials are available within a day.
